Serial No. 09/\_\_\_\_\_ 09/798,598, filed 2 March 2001,  
entitled "SYSTEM AND METHOD FOR MANAGING INTERNET TRADING  
NETWORKS", ~~assignee docket number END9 2000 0178 US1.~~

---

**Please replace the paragraph beginning at page 5, line 2,  
with the following rewritten paragraph:**

---

A2  
When the enterprise company provides such procurement  
services to more than one customer company, it has  
heretofore been required to rewrite the front end system to  
accommodate the accounting rules required to support the  
procurement activities of each additional ~~companies~~ company.  
This is time consuming and complex. There is, therefore, a  
need in the art to provide a system and method whereby an  
enterprise may provide procurement services to a plurality  
of customer companies using the same front end requisition  
and catalog system for them all.

---

Please replace the paragraph beginning at page 5, line 2,

with the following rewritten paragraph:

---

A3 Figure 6 is a diagram illustrating the inputs and outputs of the enterprise procurement services hub server 52 of the architecture of Figure 2.

---

Please replace the paragraph beginning at page 16, line 14, with the following rewritten paragraph:

---

A4 The operation and inter relationships of elements of the architecture of ~~Figures 2-b6~~ Figures 2-6 pertinent to the present invention will be described hereafter in connection with preferred and exemplary embodiments of the systems and methods of the invention.

---

Please replace the paragraph beginning at page 18, line 9, with the following rewritten paragraph:

---

A5 Referring to Figure 7, the system of the preferred embodiment of the invention includes a plurality of companies 450-452 which are associated in company groups 242 and 243, requisition and catalog system 40, and procurement services system (SAP) 42. Associated with this system is a data interchange system 44, one of several possible

Q5 communication paths with a plurality of vendors 246, 247. A company group may include one or more companies. Data interchange system 44 includes mail boxes 455, 456.

---

Please replace the paragraph beginning at page 20, line 17, with the following rewritten paragraph:

---

A6 The method for creating and maintaining user profile table 384 is further described in copending application ~~S/N~~ \_\_\_\_\_, assignee docket ~~END9 2000 0166 US1~~. S/N 09/815,318, filed 03/22/2001.

---

Please replace the paragraph beginning at page 21, line 13, with the following rewritten paragraph:

---

A7 Other data that is similarly protected (other than catalogs), for example, include contracts 469, cost centers (departments that can be charged -- a user can charge across companies 248, 249 in a company group, but not across company groups 243, 242), user profiles 384 (a user 451 may be able to initiate requests for other users 452 -- using button "change requester", which will bring up people in his company group, if configured to allow it.) More [[of]] examples of resources protected by resource profiles 465 are

07  
accounting GL accounts codes that are associated with commodity codes by company group. Business rules associated with that accounting that are company group specific -- and include accounting business rule defaults, such as fields required to be filled out based on what is being bought.

---

Please replace the paragraph beginning at page 23, line 1, with the following rewritten paragraph:

---

08  
Referring to Figure 12, the manner in which purchases from users in different company groups are leveraged to achieve volume related costs with respect to leveraged contract 480 is described. As is represented by lines 61, users 450, 451 from different company groups may, in accordance with user profiles and catalog profile 466, as previously discussed, issue requisition requests against the same line item 471 in catalog 465. Other requests may be entered with respect to other items 472. These requisition requests are transferred, as represented by lines 51, to SAP 42. SAP 42 periodically (say, hourly or daily) cuts purchase orders 474, 475 to vendor 246, with separate purchase orders for requisition requests from each company group. Invoices 478, 479 are returned to SAP 42 and bridged to RCW 40 for confirmation processing prior to payment.

ad Negative or positive confirmation processing is executed by  
Req/Cat Web server, as is more fully described in copending  
application S/N's \_\_\_\_\_ and \_\_\_\_\_, assignee  
~~dockets END9 2000 0165 US1 and END9 2000 0175 US1~~ S/N's  
09/815,318, filed 03/22/2001, and 09/815,313, filed  
03/22/2001, respectively, with separate confirmation  
requests sent to users in different company groups -- this,  
again, providing information segregation and protection.  
However, volume commitments against contract 480 are  
leveraged by purchase orders from all company groups having  
access to items in vendor 246 catalog 465.
